TECHNICAL SKILLS

Languages: JavaScript, TypeScript, SQL, HTML5, CSS3

Frontend: React.js, Redux Toolkit, Context API, Tailwind CSS, Material UI, React Query

Backend: Node.js, Express.js, RESTful APIs, AWS S3

Database: MySQL, Redis

Developer Tools: Git, GitHub, Docker, GitHub Actions, CI/CD, Postman, VS Code

EXPERIENCE

xyz | Software Engineer

Fullstack Developer

Aug 2024 – Present

- Developed location-aware store discovery workflow using an internal Google Maps-based library, with debounced autocomplete, geolocation-based nearest-store detection, backend distance ranking, fallback handling, and Redis-cached nearby-store lookups using TTL expiry and rounded coordinate-based cache keys.
- Built backend APIs for account configuration and status updates, with Sequelize-based data access, soft-delete handling, request validation, policy-based authorization checks, standardized error responses, and Jest/Supertest coverage for core request and error scenarios.
- Implemented promotional banner management workflow using AWS S3, enabling controlled upload and replacement of campaign banners via multipart handling, server-side MIME/size validation, separate metadata persistence, unique asset keys, and automated cleanup of superseded banner images to prevent orphaned S3 objects.

Frontend Developer

Nov 2022 – Jul 2024

- Contributed to a core React component library used across 6+ client applications and 10+ internal teams, building reusable carousels, modals, alerts, form controls, and navigation elements with consistent, regression-safe APIs
- Improved performance across data-heavy admin dashboards backed by 10k+ row datasets with server-side filtering, pagination, and grouping by diagnosing render bottlenecks with React Profiler, memoizing rows, columns, and handlers, debouncing search/filter inputs, and tuning React Query cache invalidation, reducing table-interaction commit time by approximately 40% and preventing stale data after mutations.
- Implemented route-based code splitting and lazy loading with React.lazy and Suspense, reducing initial bundle size by approximately 30% by deferring non-critical dashboard modules into lazy-loaded chunks.
- Built role-based admin interface supporting 4 user roles with protected routes, permission-driven navigation, conditional feature access, URL-driven table/filter state, and persisted user preferences.
- Remediated WCAG-aligned accessibility issues across React pages by improving semantic HTML, ARIA attributes, keyboard navigation, screen-reader support, and focus management in shared UI components reused across multiple screens.

Trainee

Apr 2022 – Oct 2022

- Completed frontend and SQL training covering JavaScript, React.js, responsive UI development, component-based architecture, and database-backed application workflows.

ACHIEVEMENTS

Received ABC Award 2025 for consistent delivery, ownership, and contribution to enterprise frontend and fullstack engineering initiatives.

EDUCATION

Hogwarts College of Engineering

B.E. in Telecommunication Engineering

2017 – 2021
